

The recent J3 Development at junction 3 of the M32 provides an element of residential accommodation adjacent to the M32. This development features metal standing seam cladding on the roof and some of the external walls. The development also features bright colours which provide the scheme with vitality and make it easily recognisable.

Distinctive and expressive building with coloured timber cladding

The car park at Cabot Circus is clad with metal louvres and is dramatically lit up at night, the House of Fraser terminates the motorway view and is a good mix of stone cladding and glazed elements, including a glowing glass corner at night.

The shell garage features a distinctive curved metal wall

This sports centre (boxing academy) is clad with coloured metal

This sports centre is a dynamic building with an expressive roof, the building is largely clad with metal panels

The various warehouses along this edge are clad with metal

DRAWING NOTE:
All these developments are in the immediate vicinity of the proposed site, there are a wide variety of building styles and uses on display, but they do have a common theme of being expressive in nature, using a similar palette of materials (metal) and using bold colours to make them stand out.

The proposed development would therefore create its own statement whilst also fitting in with the overall character and appearance of other buildings along the M32.
